EDUCATION

East Central University — Ada, Oklahoma
Bachelor of Science in Computer Science; Minor: Information Systems. Dean's List; President's Honor Roll (Spring 2026); International Tuition Grant ($10,000/yr, 2024–2026); Member, Alpha Chi National Honor Society. GPA: 3.63. — *Expected Dec 2027*
Relevant Coursework: Data Structures, Database Design, Operating Systems, Cloud Fundamentals, Object-Oriented Programming, Computer Architecture, Web Development

EXPERIENCE

Market Research Analyst Intern / Data Content Specialist — May 2023 – Dec 2023
Global Opportunities Nepal — *Kathmandu, Nepal*

- Collected and cleaned raw US university data using Python (pandas, numpy), merging institutional and program-level datasets, filtering for STEM-designated programs, filling missing values, and standardizing variable names across multi-year cohorts.
- Analyzed admission trends for international students and automated executive-ready summary reports using openpyxl and python-docx, highlighting top university recommendations.
- Visualized findings using Matplotlib, including bar graphs of top-choice universities and scatter plots mapping tuition costs vs. post-graduation earnings, supporting placement of more than 50 students.
- Researched US study abroad trends and produced TikTok video content and ad templates, growing followers by more than 2,000 and reaching more than 1,000 views.

PROJECTS

Customer Churn Predictor — Nov 2026 – Present
React, Vite, FastAPI, Python, JavaScript, Git

- Built a web app with a Python backend and a React frontend that predicts whether a customer is likely to stop using a service.
- Trained a machine learning model on customer data to make predictions, and connected it to the backend so results load quickly when a user submits a request.
- Set up the backend to accept user inputs, run them through the model, and return predictions, with security rules so the frontend and backend can communicate safely.
- Managed the frontend so user inputs are checked right away and the page updates instantly based on the prediction result.

Bhumika's Travel Journal — Sep 2026 – Oct 2026
Python, FastAPI, SQLite, Leaflet.js, GeoJSON, Pillow, HTML/CSS, JavaScript

- Built a personal travel map that reads location and timestamp data from uploaded photos and pins them to an interactive map of the US.
- Used Leaflet.js to highlight visited states with colored overlays and clickable labels showing trip details.
- Set up a FastAPI and SQLite backend to handle photo uploads, store location data, and track visited states, with a timeline sidebar supporting search and filtering by state or date.

AI-Powered Grammar Assistant — Jan 2026 – Mar 2026
Python, OpenAI API, Prompt Engineering

- Built a Python CLI app that corrects grammar and syntax in real time using the OpenAI API, running in a continuous input loop.
- Controlled output by setting a system role with negative constraints, wrapping user input in double-quote delimiters, and setting temperature to 0.2 for consistent results.
- Added input validation and error handling to catch empty inputs and edge cases without crashing.

SKILLS

Languages: Python, JavaScript, SQL, HTML/CSS, C
Technologies / Frameworks: React, FastAPI, Vite, Leaflet.js, SQLite, Pillow
AI / ML Tools: Random Forest, scikit-learn / joblib, OpenAI API, Prompt Engineering
Data / Visualization: pandas, numpy, Matplotlib, Tableau, Excel
Developer Tools: Git, GitHub, VS Code, Google Cloud Platform

AWARDS & HONORS

- Best Beginner Build (Spring 2026): Personal Portfolio Website, Programiz March Challenge
- Wall of Inspiration Feature (Spring 2026): Hatch and Hunt recognized by Programiz for UI/UX design and originality
